Enterprise Dynamics® - Stand-alone Version

Dear User,

Thank you for purchasing Enterprise Dynamics®!

Enclosed is the Enterprise Dynamics version 8 on CD-ROM.

To install the software:

Note: On Windows 7, Vista, NT, 2000, XP and Vista you must have Administrator rights to install the software and the hardware key.

1. Insert the CD-ROM into the drive. An information application will be launched automatically. In the Menu select 'Install' and follow the instructions. If autorun doesn't start the application, then run the "SETUP\setup.exe" program from the command line or windows explorer.
   Note: Make sure that you install every major release from Enterprise Dynamics (for example the 8.0 version) into a new directory. Minor releases must be installed into an existing major release install directory.

2. Your E.D. license can be protected with a hardware key. If you received a hardware key with your software, please plug the key into the appropriate port (Parallel/USB) depending on the type of key. If your Operating System detects the hardware key, follow the wizard to automatically install the driver. If it is not recognized, install the driver (hdd32.exe) manually before running the software. The driver installation program can be found in the installation application at the installation CD. A USB key is correctly installed when the red LED light burns continuously.

3. When you run the application for the first time, you are asked to enter your license information. This is supplied on a separate license sheet that is enclosed in this package.

4. First select the type of license that you purchased and click next.

5. Enter your license name, license number and the two license codes **exactly** as written on the license sheet and click next.

6. Click 'add' and enter a product code. Repeat this step for all of your product codes.

7. When you are done adding all product codes click 'Finish'.

Note: If you get a license error executing the application please run the UpdateLC.exe application to update your license information. You can find this application in the start menu. If you get a hardware key error, please repeat installation step 2.

Enterprise Dynamics can be launched through a shortcut containing parameters. In the section "Creating a command line shortcut and passing parameters" is explained how this is achieved.

Creating a command line shortcut and passing parameters:

It is possible to pass extra command line parameters with E.D. This improves working with network system environment variables that are common in Windows 7, Vista, Windows 2000 and Windows XP, but can also be used under other Windows Operating systems or Novell Application Launcher (NAL).
A command line shortcut should be build up the following way:

Parameter	P0
Explanation	The full path to the executable and the executable (.exe) itself
Required	Yes
Directory Rights	Read
Comments	Note that you can change the name of the executable but the default E.D. application launcher will not work.
Examples	"C:\Program Files\Enterprise Dynamics\ED.exe" "%ProgramFiles%\Enterprise Dynamics\ED.exe" "%PROGS%\ED80\ED.exe"

Parameter	P1
Explanation	The full path to the Enterprise Dynamics application launcher (.app)
Required	No
Directory Rights	Read
Comments	When no parameters are passed, the default file with the same name (without extension) as the executable is launched. (ED.app)
Examples	"C:\Program Files\Enterprise Dynamics\ED.app" "%ProgramFiles%\Enterprise Dynamics\ED.app" "C:\Program Files\Enterprise Dynamics\Myapp.app"

Parameter	P2
Explanation	The full path to a work directory.
Required	No
Directory Rights	Read / Write by user
Comments	The application uses this directory to store temporary files and by default stores and opens files here. This parameter **requires closing with a fore slash**.
Examples	"C:\MY DOCUMENTS\" "C:\MY DOCUMENTS\EDWORK\" "%ProgramFiles%\Enterprise Dynamics\Work\" "Y:\EDWork\" "%HOMESHARE%\"

We welcome your remarks, suggestions and ideas for improvement of the Enterprise Dynamics software. Please send them to us directly or ask your local agent to transfer them to us.

We look forward to hear from you or to meet you at one of our user conferences.

Kind regards,

INCONTROL Simulation Software B.V.
